◆ Summary

Founder-operator who ships production LLM and browser-automation pipelines daily on the Claude Code / Anthropic Agent SDK stack. I run the **Audit** → **Evals** → **Deployment** loop as my default working mode across a revenue-generating media business, a live wellness subscription product, and a shipped studio site that hosts two WebGL games in the browser. Built and operate a four-agent “digital company” on Claude Code with **130+ custom skills**, MCP servers, hooks orchestration, and persistent memory. Deep Playwright + Python for OAuth, live-key Stripe, resilient retry logic, and verification gates. Portfolio-first and fully verifiable: public GitHub, live URLs, 40+ shipped digital products.

◆ Core Skills

LLM / Agent Engineering: Claude Code SDK, Anthropic Agent SDK, multi-agent orchestration, MCP server consumption + authoring, prompt engineering, drift-aware prompting, LLM output verification, model routing (Haiku / Sonnet / Opus), 130+ custom Claude Code skills authored

Front-End & Graphics: Hand-rolled HTML/CSS/JS (zero-framework, performance-first), Three.js / WebGL, hand-authored SVG rendering, responsive and mobile-first layout, Core Web Vitals, semantic markup + JSON-LD, automated visual regression and pre-deploy QA gates

Automation, QA & Ops: Playwright (production browser automation), resilient retry/backoff, rate-aware pacing guardrails, OAuth integration, per-step verification before deploys, ffmpeg pipeline orchestration, live env / secret rotation on Render + Stripe, multi-rig git parity

Payments & Live Infrastructure: Stripe (live keys, subscriptions, webhooks), Google OAuth flows, session auth, Render deploys, GitHub Pages + Actions, live incident response

Languages: Python, TypeScript, JavaScript, Bash, PowerShell, SQL, HTML/CSS/SVG

Infrastructure: Render, n8n, Supabase, Ollama, ComfyUI, Qdrant, RunPod cloud GPU (RTX 4090/5090), Coolify, Ghost, self-hosted SaaS stack administration

Generative Media Pipelines: Kling, Higgsfield, Remotion (programmatic video in React), Manim, F5-TTS / Kokoro / XTTS-v2 voice cloning, ElevenLabs, Suno

Security Hygiene: OWASP Top 10 awareness, secrets management (.env discipline, no-commit hooks), automated security-review workflows, MCP server boundary hardening

◆ Experience

Co-Founder & Lead Technical Operator — Quantum Melanin Media (QMM)

REMOTE · 2025–PRESENT

Vertically integrated media-tech studio shipping books, AI tools, generative video, browser games, and digital products. Own all technical operations: product, infrastructure, automation, and distribution.

- Designed and shipped **quantummelaninmedia.com** as sole engineer — a **74 KB** hand-written page with **zero frameworks and zero third-party scripts** that hosts two complete WebGL games playable in-browser (Three.js racer + chess engine, no download, no signup), served from GitHub Pages on a custom domain at **~0.5s TTFB**.
- Shipped that site with its own pre-deploy QA harness (Node + Playwright): screenshots desktop and phone, then fails the build on 404s, JS errors, broken images, horizontal overflow, and any **<video> whose clock does not advance on play**.
- Diagnosed a production video failure that passed every available check — HTTP 200, correct duration, clean ffmpeg decode, **canPlayType** reporting “probably” — and still froze on its poster in every Chrome install (VP9 PIPELINE_ERROR_DECODE). Changed the shipped format rather than tuning the encoder, then made the play-and-verify gate permanent.
- Built the asset pipeline behind it: PowerShell regenerates every image and video from the source game repos, Amazon and Gumroad (nothing hand-made, nothing stale); a CDP-screencast recorder captures real gameplay to mp4 for the hero loop; PyMuPDF renders

graphic-novel interiors into a keyboard-navigable lightbox.

- Architected a four-agent “digital company” on Claude Code — skills, hooks (PreToolUse / PostToolUse / Stop), rules, and persistent memory layers — and authored **130+ production skills** covering video pipelines, image generation, voice cloning, social posting, and security review.
- Built **quantus-autoposter** (Python + Playwright): builds, encodes, captions, and uploads multi-format video ads to YouTube and X — OAuth handling, FFmpeg/MoviePy encoding, resilient upload retry logic.
- Produced a multi-part AI-animated feature from **100+ continuity-chained** generative video clips, driven by a custom editorial-timing pipeline (ffmpeg speed-ramps, holds, per-beat retiming) with proof-of-work gating before every release.
- Shipped **MarketPulse** (Python): live crypto + stock signal dashboard (RSI, MACD, golden cross, multi-timeframe confluence) with a **Proof Mode** backtest verification layer and a hand-rolled SVG chart with snap-to-candle precision. Listed commercially; deployed to Render.
- Shipped **KAREN** (open-source, Python): scans DOCX / PDF / Markdown manuscripts for structural typography damage — orphan fragments, false-bold sentences, buried headings, merge bugs.
- Operate RunPod RTX 4090/5090 cloud GPU rigs (ComfyUI + Ollama + n8n + Qdrant) for generation and RAG at **~\$25/month** variable cost; architected a full self-hosted SaaS stack (Ghost, n8n, Supabase, Coolify, Listmonk, Plausible, Penpot, AppFlowy).
- Shipped **40+ digital SKUs** on Gumroad and launched a 9-SKU print-on-demand apparel line — cover art, manufacturer-spec design files, listings, and product-image uploads automated end to end with Python/PIL + Playwright.

Solo Founder-Engineer — Alignment 365

REMOTE · 2025–PRESENT

Live wellness subscription platform on Render with live-key Stripe billing. Sole engineer for auth, payments, ops, and reliability.

- Rebuilt the auth stack in production: dual-path Google OAuth + email/password. The original silently failed for Google users; rotated the OAuth client ID and shipped both surfaces to prod **July 2026 with zero regressions on paying customers**.
- Built a **Playwright ops harness** that scripts Render env-editor and Stripe dashboard actions, so config changes and live-key rotations never require manual dashboard clicking under incident pressure.
- Full live-key Stripe integration: test + live keys, webhooks, and a checkout regression suite that replays the whole flow before every deploy.

◆ Selected Projects

- **quantummelaninmedia.com** — 74 KB hand-written site, zero frameworks, two WebGL games playable on the domain, automated pre-deploy QA gate. quantummelaninmedia.com
- **MarketPulse** — Python + hand-rolled SVG market-signal dashboard with backtest Proof Mode. github.com/respectfulnrespected59-source/marketpulse
- **KAREN** — open-core manuscript typography scanner (DOCX / PDF / Markdown). github.com/respectfulnrespected59-source/karen
- **Alignment 365** — live wellness subscription on Render + Stripe, Playwright ops harness, dual OAuth. alignment365.onrender.com
- **QMM Stack** — four-agent Claude Code architecture: skills + agents + rules + persistent memory. *Private repo; live walkthrough on request.*

◆ Education

Skyline High School, Oakland, CA — Diploma.

Fully self-directed engineering education: primary vendor documentation, source-level study of production codebases, and continuous hands-on shipped builds — verifiable across the GitHub and portfolio links above.
